PROJECTS

Smart and Secure Voting Management System

- Developed a biometric-based voting system using Python, Flask, and SQLite for secure digital voting.
- Integrated Arduino and R307 fingerprint sensor for hardware-based voter authentication.
- Implemented real-time face recognition using MTCNN and FaceNet for identity verification.
- Designed a three-layer authentication framework to ensure “One Person, One Vote” and prevent duplicate voting.

Automated Parking Management System

- Developed a full-stack Smart Parking Management System using the MERN Stack, Tailwind CSS, and REST APIs to automate parking operations.
- Implemented JWT authentication, parking slot management, vehicle tracking, and payment processing.
- Built an admin dashboard for real-time monitoring, vehicle management, reports, analytics, and system settings.
- Integrated APIs using Axios and deployed the project on Netlify, Render, and MongoDB Atlas.
